Future Actions on Freight Logistics

Key actions

- **Cut red tape** to facilitate administrative procedures and information flows by harmonized and modern IT systems in all Member States
- **Enhance supply chain security** by applying a risk-based approach and setting incentives for more certification like reduced inspections
- **Enforce existing legislation** in the EU Member States to ensure identical conditions for business and remove national restrictions
- **Foster sustainability in logistics** by setting a (global) standard for carbon-footprint and fostering intermodal transport and green technologies i.e. for energy efficiency and traffic management
- **Support deployment of innovative solutions** e.g. interoperability of IT standards
