The carbon footprint of the supply chain

How the industry uses EU standards to manage its carbon footprint

AGENDA
Welcome Bogusław Liberadzki MEP
Introduction Véronique Corduant , European Logistics Platform
<i>“EcoTransIT World – Supporting Green Logistics”</i> Dr. Libor Lochman , CER
<i>„Green Freight Europe – the road to sustainable transport “</i> Joana Barata Correia , IKEA
<i>“Carbon emissions reporting for a global company and its customers – challenges and opportunities!”</i> Dr. Klaus Hufschlag , Deutsche Post DHL
<i>“Perspective of DG MOVE”</i> Magda Kopczynska , DG MOVE
Wrap-up and Outlook Véronique Corduant , European Logistics Platform
Closing Remarks Bogusław Liberadzki MEP

The carbon footprint of the supply chain

How the industry uses EU standards to manage its carbon footprint

What has been achieved so far?

Commitment of the industry to tackle the challenge of climate change and take action by

- 1 calculating, reporting and managing its carbon emission
- 2 establishing independent industry platforms
- 3 using new EU CEN standards (EN 16258)

What are the challenges?

The carbon footprint of the supply chain

How the industry uses EU standards to manage its carbon footprint

EXAMPLES OF DIFFERENT INDUSTRY INITIATIVES

Aviation	Maritime	Road	Rail and other transport modes
<p>Airfreight Carbon Initiative (ACI) aims at creating a standardized and comparable format for exchanging information on GHG emissions intensity for the airfreight sector and by the airfreight sector.</p> <p>AIRFREIGHT CARBON INITIATIVE</p>	<p>Clean Cargo Working Group is a global business-to-business initiative made up of leading cargo carriers and their customers, dedicated to environmental performance improvement in marine container transport through measurement, evaluation, and reporting.</p> <p>clean CARGO Sustainable Transportation</p>	<p>GreenFreight Europe aims to be the independent voluntary program for improving environmental performance of road freight transport in Europe.</p> <p>GREEN FREIGHT EUROPE</p>	<p>EcoTransIT compares the energy consumption and emissions of freight transported by rail, road, ship and aircraft and calculates the environmental impacts of different carriers globally.</p> <p>EcoTransIT World</p>

Wrap-up and Outlook Véronique Corduant , European Logistics Platform
Closing Remarks Bogusław Liberadzki MEP

Wrap-up and Outlook

Step-by-step approach:

first ensure easy carbon footprint calculation guaranteeing fair benchmarking

second development of more sophisticated standards to provide more exact carbon footprint data

Thank you for your attention!
